Vision is an important part of our lives, yet the ability to see is something that many people take for granted. It’s easy to not think about caring for our eyes until something goes wrong with them. What do you do when you have a problem with your vision? Eye infections can happen for a number of reasons, including wearing dirty contact lenses, touching your eyes with unclean hands or even having certain medical conditions. Sometimes, you might mistake an eye infection for an allergy or cold. An eye disease is any condition that affects the eye. These may be minor conditions that clear up on their own or serious conditions that lead to permanent loss of sight. They also come with a host of varying symptoms. As the saying goes, eyes are the window to the soul, so it is important to keep them as sharp and clear as possible.

Unfortunately, accidents, age or genes can lead to a loss of full or partial vision, leaving us with a foggy or blurred view. If you have a condition that affects the blood vessels, such as high blood pressure, heart disease or diabetes, it can raise the chances of your having an eye stroke. They happen the same way other strokes do, by a blockage of blood flow. These tips can help ease your symptoms. Are your eyes red and irritated by the end of a day at the office?
