Receptors in the Human Nervous System

- Distribution of receptors for the excitatory and inhibitory amino acids, (glutamate, GABA and benzodiazepines) as well as the opioid peptides, angiotensin and other neuropeptides. The distribution of multiple types of serotonin receptors is considered for the consideration of possible interactions between different systems. The book surveys the distribution of receptor subtypes for the classical monoamine transmitters (acetylcholine, adrenaline, noradrenaline and serotonin) as well as a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children’s cognitive and emotional development, and more. Authority yet accessible, From Neurons to Neighborhoods presents the evidence about “brain wiring” and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.
