Pathways Among Child Maltreatment, Perceived Control and Psychological Distress - Jason Corbin Steward - 2005

Each year, child protective services receive reports of child abuse and neglect involving six million children, and many more go unreported. The long-term human and fiscal consequences of child abuse and neglect are not relegated to the victims themselves -- they also impact their families, future relationships, and society. In 1993, the National Research Council (NRC) issued the report, Understanding Child Abuse and Neglect, which provided an overview of the research on child abuse and neglect. New Directions in Child Abuse and Neglect Research updates the 1993 report and provides new recommendations to respond to this public health challenge. According to this report, while there has been great progress in child abuse and neglect research, a coordinated, national research infrastructure with high-level federal support needs to be established and implemented immediately. New Directions in Child Abuse and Neglect Research recommends an actionable framework to guide and support future child welfare practitioners.

Mediating the Relationship Between Childhood Emotional Maltreatment and Psychological Distress - Stephanie Lim - 2017

The aim of the present study was to examine the mediating roles of emotion dysregulation and cognitive and behavioral avoidance in the relationship between childhood maltreatment and psychological distress. A total of 305 participants from a large public university volunteered to participate in exchange for course credit. Tests for mediation revealed that emotion dysregulation and cognitive and behavioral avoidance partially mediated the effect of childhood emotional maltreatment on psychological distress. When examined in separate analyses, 65% of the effect of maltreatment on distress is mediated through emotion dysregulation, while 39% of the effect is mediated through cognitive and behavioral avoidance. Given previous findings linking maltreatment to an increased risk for problematic emotional functioning, additional work on how to enhance resilience by improving emotion regulation skills and reducing avoidant behaviors among at-risk children and young adults is needed.

Childhood Maltreatment - Christine Wekerle -
The serious consequences of child abuse or maltreatment are among the most challenging things therapists encounter. This volume integrates results from the latest research showing the importance of early traumatization into a compact, practical and evidence-based guide for practitioners. This text first overviews our current knowledge of the effects of childhood maltreatment on psychiatric and psychological health, then provides diagnostic guidance, and subsequently goes on to profile promising and effective evidence-based interventions. It helps the practitioner or student to know what to look for, what questions need to be asked, how to handle the sensitive ethical implications, and what are promising avenues for effective coping."--Publisher.

Age of Onset of Mental Disorders - Giovanni de Girolamo - 2018-11-11
This book presents a thorough and critical review of current knowledge about the age of onset of mental disorders. The opening chapters offer information about the impact of the age of onset on the clinical picture, course, and outcome of physical illnesses, and about the neurobiological implications and correlates of different ages of onset. The impact and correlates of the ages of onset of all the most important mental disorders are then discussed in detail by internationally renowned scientists. The background to the book is the recognition that a better understanding of age of onset makes it possible to estimate the lifetime risk of disorders, helps to elucidate pathogenesis, and facilitates efficient, targeted clinical management. The book will be of value reading for clinicians, mental health professionals, mental health researchers, epidemiologists, and different stakeholders in the mental health field.

The sections on intervention strategies highlight the often-conflicting objectives facing professionals and policymakers balancing the interests of children, families, and facilities. But despite many national and regional variations, two themes stand out: the universal right of children to live in safety, and the ongoing need for professionals and community to ensure this

Depression in Parents, Parenting, and Children - Institute of Medicine - 2009-10-28
Depression is a widespread condition affecting approximately 7.5 million parents in the U.S. each year and may be putting at least 15 million children at risk for adverse health outcomes. Based on evidentiary studies, major depression in either parent can interfere with parenting quality and increase the risk of children developing mental, behavioral and social problems.

Child abuse and neglect is as, at a minimum any recent act or failure to act on the part of a parent or caretaker which results in death, serious physical or emotional harm, sexual abuse or exploitation; or an act or failure to act which presents an imminent risk of serious harm. Four major types of maltreatment are usually included: neglect, physical abuse, sexual abuse, and emotional abuse. Although any of the forms of child maltreatment may be found separately, they often occur in combination. This book presents issues and research in this field.

The Effect of Material Hardship on Child Protective Service Involvement - - 2012

This study used four waves of survey data on 1,135 families from the Illinois Families Study. Utilizing a longitudinal and prospective study design, this study explores the following issues within low-income populations: (1) whether material hardships are associated with child protective services (CPS) investigation; (2) whether the effect of material hardship on child maltreatment differs by the type of child maltreatment; and (3) whether psychological distress mediates the association between material hardship and child maltreatment. Pooled logistic regressions and fixed effects logistic regressions were used. Although results from pooled logistic regressions suggested that caregivers who experienced material hardship are more likely to be involved in CPS, estimates from fixed effect models that adjust for selection bias indicated that changes in material hardship status has a strong effect on CPS investigation. In general, neglect investigations are responsive to types of hardship such as housing and food, while physical abuse investigations are responsive to levels of hardship regardless of specific type of hardship. The association between material hardship and CPS involvement are not fully explained by depressive symptoms or parenting stress. The study results suggest that to prevent child maltreatment, it might be more effective to address the family's unmet material needs by offering economic support programs.

findings and provide practical, fact-based information on key issues. The book is an essential reference source on procedural issues, treatment options, and risk management strategies necessary to make high-quality, ethical evaluations. Child maltreatment risk assessments are complex, specialized evaluations with the potential for permanent legal termination of all parent-child contact on one hand, and the possibility of injury and even death on the other. Because of the weighty nature of these issues, the legal standards imposed on individual states to justify intervention is great, and evaluators must be well versed in the most current material available. Child Maltreatment Risk Assessments provides up-to-date information on the effects of maltreatment, empirically based risk factors for child abuse and neglect, specialized assessment techniques and interventions, and professional practice issues. The book emphasizes the importance of individual and cultural differences.
Child Maltreatment Risk Assessments also includes a step-by-step guide to conducting and writing quality evaluations, including:
- components of an evaluation report
- forensic versus clinical evaluations
- methods of assessment
- assessment domains and much more!

Child Maltreatment Risk Assessments: An Evaluation Guide is an invaluable tool for clinicians, lawyers and judges, human service agency personnel, and others involved in child maltreatment cases as well as students who represent the next generation of clinicians working in child abuse prevention and treatment.
