Wind as a Geological Process - Ronald Crevelry - 1987-08-02
This book gives an account of aeolian processes and landscapes. Aeolian processes play an important role in the geologic evolution of Earth, and their study is crucial for understanding Earth's past and present climate. The book includes a detailed discussion of the processes involved in the formation of sand dunes, sand sheets, and dune fields, and describes the complex interactions between wind, vegetation, and soil. The book also explores the role of aeolian processes in shaping the landscapes of the Earth, and highlights the importance of this topic for the study of Earth's geologic history.

Wind as a Geological Process - Ronald Crevelry - 1987-06-08
This book provides an introduction to the study of wind as a geological process. It covers the basic principles of wind erosion and deposition, including the factors that influence wind transport and the processes of sand deposition. The book also discusses the role of wind in the formation of desert landscapes, and explores the importance of aeolian processes in shaping the Earth's surface.

A NEW THEORY OF THE EARTH - FASHI JANG - 2017-07-10
Through the simulation test, this book A NEW THEORY OF THE EARTH: THE ORIGIN AND EVOLUTION puts forward the New Theory of Solar System. It explains the origin of the rotation of the celestial body, the revolution, the rotation of Venus, the reverse of the comet's orbit, and explains the reasons why the Earth is tilted, Jupiter is upright, and Uranus lies in the orbit. The book puts forward a new theory of the Earth. The formation of the Earth was out of the solar system, the Sun captured the Earth, and then geological period came into the planar eccentric. The structure of the Earth is divided again with new methods. The simulation results show that the core is not in the center of the earth, and the speed of which is faster than that of the outer ring. The new theory also explains the formation of the earthquake and volcano. The book puts forward the theory of multiple causes of the crustal movement.
