students of Geriatrics in particular, who will find everything they need to know within a single volume. The reader/treating doctor will be able to answer the queries of their patients in other fields related to them like financial, legal and constitutional matters. The inclusion of subjects like epidemiology and hospital setup will make it useful for planners as well.

A Conversation with Martin Heidegger - R. Tallis - 2011-03-13

This open access book takes a multidisciplinary approach to provide a holistic understanding of late old age, and situates the aged person within the context of family caregivers, clinical, and other institutions. All through the book, the author discusses preparatory work for an aging individual as well as the society in the Indian context. The book highlights inevitable but mostly neglected health issues like depression, dementia, fall, frailty and provides detailed analyses of solutions that are feasible in Indian context.

How to Read a Paper - Trisha Greenhalgh - 2019-05-06

Required reading in many medical and healthcare institutions, How to Read a Paper is a clear and wide-ranging introduction to evidence-based medicine and how to evaluate scientific literature. The 6th edition of the book has been updated with a new global perspective. Trisha Greenhalgh guides readers through each fundamental step of inquiry, from searching the literature to assessing methodological quality and appraising statistics. How to Read a Paper addresses the common criticisms of evidence-based healthcare, dispelling many of its myths and misconceptions, while providing a pragmatic framework for interpreting study results and communicating them to patients.

principles of geriatric medicine

medical and research ethics, and enhanced usage of diagnostic and treatment algorithms. With practical advice and space for personalized notes, this handbook will be

with completely overhauled chapters on neurology and respiratory medicine, the latest management guidelines on inherited metabolic disease, further information on

of clinical problems and treatment options. Taking a child-centred approach to the subject, the authors have provided comprehensive coverage of areas such as

physical exam maneuvers that will win you points without costing time Proven study and exam strategies from students who passed

full-length practice cases that simulate the real exam – including all new pediatric and telephone interviews as well as suggested closing statements for each case A

First Aid for the USMLE Step 2 CS, Third Edition

Focus on the clinically relevant aspects of anatomy and bridge normal anatomy to common clinical conditions with Netter's Clinical Anatomy, 4th Edition. This easy-to-

Case-Based Textbook is the ultimate resource for graduate and undergraduate medical students and certificate candidates providing mental health care for aging

only resource that is specifically designed to train both American and Canadian candidates for specialty and subspecialty certification or recertification in geriatric

This textbook presents real-world cases and discussions that introduce the various mental health syndromes found in the aging population before delving into the core concepts covered by geriatric psychiatry curricula. The text follows each case with the vital information necessary for physicians in training, including key

Emphasis is placed on the impact of aging, pre-existing medical problems, effects of polypharmacy, advanced directives and end-of-life wishes on acute surgical

Geriatric Trauma and Critical Care - Jay A. Velon - 2013-12-21

Clinical Trauma: A Step-By-Step Approach to the Management of the Patient presenting with surgical pathology. Using current literature and evidence-based resources, the textbook elucidates the unique nature of caring for the elderly population. The structure of the volume places emphasis on the geriatric patient’s perspective and the impact of biological, psychological, and social factors on their experience with the aging process. Emphasis is placed on the impact of aging, pre-existing medical problems, effects of polypharmacy, advanced directives and end-of-life wishes on acute surgical

Advances in Geroscience - Felipa Sierra - 2015-11-10

This book provides the first comprehensive overview of a new scientific discipline termed Geroscience. Geroscience examines the molecular and cellular mechanisms that explain why aging is the main risk factor for most chronic diseases affecting the elderly population. Over the past few decades, researchers have made impressive progress in understanding the genetics, biology and physiology of aging. This book presents vital research that can help readers to better understand how aging is a critical malleable risk factor in most chronic diseases, which, in turn, could lead to interventions that can help increase a healthy lifespan, or 'healthspan.' The book begins with an analysis of the Geroscience hypothesis, as well as the epidemiological underpinnings that define aging as a candidate main risk factor for most chronic diseases, including cancer, cardiovascular disease, diabetes, neurodegenerative diseases, osteoporosis, arthritis, diabetes, dementia, kidney disease, vision impairment, and AIDS/HIV. It finishes with a chapter on pain in the elderly and an overview of future steps needed to bring the newly acquired knowledge into the clinic and the public at large.

Case Studies in Gerontological Nursing for the Advanced Practice Nurse - Meredith Walter Kazer - 2012-02-02

As the fastest growing population sector worldwide, older adults are seen in almost every care setting in which clinicians practice. Developed as a resource for advanced practice nurses in any setting. Case Studies in Gerontological Nursing for the Advanced Practice Nurse presents readers with a range of both typical and atypical clinical scenarios from real clinical scenarios. The book is organized into six units covering cases related to aging, common health challenges, health promotion, environments of care, care planning and independence. Each case presents related gerontological and independent thinking questions, and a thorough discussion of the case resolution through which students and clinicians can enhance their clinical reasoning skills. Designed to support and enhance the student's capacity to deliver care, the cases are organized into six units covering cases related to ageism, common health challenges, health promotion, environments of care, care planning and independence.

Essentials of Clinical Geriatrics - Robert L. Kane - 1994

The third edition of the highly acclaimed Essentials of Clinical Geriatrics gives you clear guidelines on diagnosis, treatment, and follow-up care of all common geriatric

This book provides the first comprehensive overview of a new scientific discipline termed Geroscience. Essentials of Clinical Geriatrics - Robert L. Kane - 1994

The third edition of the highly acclaimed Essentials of Clinical Geriatrics gives you clear guidelines on diagnosis, treatment, and follow-up care of all common geriatric
essential information on important topics such as delirium, cognitive impairment, dementia, falls and mobility disorders, Parkinson disease and other movement disorders, sleep disorders, and arthritis includes guidance on care in all settings - clinic, home, hospital, and long-term care, as well as pre- and post-operative settings New content on technology to enhance geriatric care, caregiving support, the unique needs of older immigrants, Medicare and Medicaid, legal issues and conservatorship, aid in dying, assisted living care, short-stay rehabilitation, prostate cancer, marijuana use, syncope, and driving safety

Current Diagnosis and Treatment: Geriatrics, 3/e - Anna Chang - 2020-07-15
The definitive guide to safe, effective care of older adults—updated with important new content and streamlined for quick access Covers the complete range of topics in geriatric care, including theory and fundamentals, assessment, conditions, diseases, symptoms, policies, and societal issues that affect older patients Provides a framework for using the functional and cognitive status, prognosis, and social context of patients to guide diagnosis and treatment of medical conditions Delivers essential information on important topics such as delirium, cognitive impairment, dementia, falls and mobility disorders, Parkinson disease and other movement disorders, sleep disorders, and arthritis Includes guidance on care in all settings - clinic, home, hospital, and long-term care, as well as pre- and post-operative settings New content on technology to enhance geriatric care, caregiving support, the unique needs of older immigrants, Medicare and Medicaid, legal issues and conservatorship, aid in dying, assisted living care, short-stay rehabilitation, prostate cancer, marijuana use, syncope, and driving safety

This volume is a collection of reports dealing with geriatrics and gerontology. The first section provides an introduction to the common medical and non-medical problems of aging. The second section concentrates on one of the most devastating problems of the elderly, that of dementia. Finally, the third section deals with newer topics such as hearing loss, acute and chronic lymphoproliferative disorders, and the use of nerve and muscle stimulation to reduce morbidity and mortality associated with degenerative neurologic diseases. The chapters contained herein represent the transformation of managing older patient problems that commonly impact quality of life after the age of 60 years.

Falls of the elderly - Sirc Editore - 2014-10-01
In 10% of cases, falls of the elderly lead to serious injuries, e.g. hip fractures. Reduce already in advance both the person-related (internal) and the environment-related (external) risk factors for falling. Consider also the prevention and treatment of osteoporosis.
